

Outdoor Contacts

With a wireless outdoor sensor, you can now protect your backyard shed or barn, your detached garage, your pool gate or your perimeter fence. The outdoor sensor provides waterproof and weatherproof protection in any temperature. You can mount the wireless outdoor sensor on both flat and curved surfaces.

It has a wireless range of 200' nominal from your wireless home alarm system and if you have a large property we will use a wireless repeater to boost the range even further.

The outdoor contact can even be painted so that it blends into the mounting surface. Make sure to only use paint that is recommended for plastic.

The outdoor sensor can be programmed to email and/or text you to alert you that the contact has been opened.
