

## Outdoor Motion Detector

---

The lithium battery powered wireless outdoor motion detector is an ideal solution for outdoor sensing needs. It's perfect for both residential (activity monitors, e-mail alerts, turning on video cameras) and commercial (protecting copper theft, utility and electrical substations, cellular sites, commercial buildings, car lots and more) applications.

The outdoor motion detector consists of two passive infrared (PIR) sensors that must both be tripped to declare an alarm, providing immunity to false alarm sources, pets and other animals. These sensors can be adjusted to alter the detection range. The transmitter can send alarm, tamper and low battery condition messages to the alarm panel.
