Remote Mobile App

Smart Home Automation
Your smart home security & intelligent automation is connected and conveniently controlled with one simple, easy to use app.

Arm or disarm your system anytime from your web connected device. See a complete history of when your doors and windows were opened or closed. See if someone walked passed a motion detector, even when the system is disarmed.

Geo-Fencing features include:
Arming Reminders - Location-based Arming Reminders let you know if you leave the house and forget to arm the system.
Thermostat Automation - You can have your thermostat automatically turn up or down when you enter or exit a specified Geo-Fence.
Video Recording - Video Customers can use Geo-services to automatically pause video recording schedules when they are at home.

Everything is controlled by one app and your devices all talk to each other. Instead of sending single commands to your lights, thermostat and door locks, everything works together with customizable triggers. You can do less, but get an added level of security and convenience.

App works on iOS, Android and Windows Phone devices.
