New Studio Design Series Thermostat

Experience a Newer Level of Comfort and Saving

The intelligently integrated Smart Thermostat allows you to take control of your energy use using whole-home intelligence from the security system, it understands what's going on, and can spot more opportunities to save energy.

Sleek New Design: Thinner design with both Current temperature and target temperature displayed. Icon image of mode setting replaced by "Cool" or "Heat" so you know which mode you are in. Separate fan control allows you turn turn your fan on without heating or cooling.

Remote Access and Control: Access and control the comforts of home right from your smartphone, tablet, or computer — no matter where you are.

Custom Schedules: Create custom schedules that automate your thermostat to adjust itself around your lifestyle.

Location-Based Automation: Use Geo-Services to have your thermostat automatically adjust itself to save energy while you're out.

Critical Temperature Alerts: Receive text or email alerts to know instantly when your thermostat reaches extreme temperatures to prevent pipes from freezing or alert you if your AC unit is not working properly.

Humidity Level: New intelligence monitors humidity levels in your home to combat mold conditions

Machine Learning Technology: Proactively monitors your HVAC system, alerting you early to trouble conditions so you can avoid cascading equipment failures, a freezing home, or costly off-hour emergency repairs.

whole-home intelligence: Detect when a window or door is left open and cut back the thermostat to avoid "Paying to heat the neighborhood"!
